

EverydaySafe™

SECURING VALUABLES AND IMPORTANT BELONGINGS
IN A CONCEALED, INNOVATIVE AND SIMPLE WAY

Convenient and easy access using your fingerprint or smartphone.

DID YOU KNOW?

In 2019, 417,416 burglaries were reported in the UK, with only very few resolved. (Source: Crime Survey for England and Wales – CSEW). The average burglary lasts around 13 minutes, with criminals not only targeting cash and jewellery, but now specifically looking for items such as credit cards, passports and car keys.

The EverydaySafe™

Your opportunity to provide customers with a game changing security solution, differentiate from competitors and mark your business as innovators.

For those who value control in their lives, a new and innovative solution that provides accessible security, when and where you need it most.

Chubb safes is proud to offer the EverydaySafe™, a patented* solution that answers the security concerns of vast numbers of homeowners, providing a secure place for them to store their valuables and belongings in a convenient and accessible environment – the kitchen. With the kitchen being the heart of a home, homeowners are seeking consistently more innovative and efficient ways in which to utilise this space.

The EverydaySafe™ is conveniently accessible yet completely concealed, as neither a handle or the locking system is visible. The EverydaySafe™ can be accessed incredibly quickly and simply, utilising either a hidden biometric scanner or dedicated mobile phone app. Each option offers absolute privacy and security and enables users to open their safe, extract or deposit their items and close it again, all in only a few seconds.

The EverydaySafe™ is a German quality product designed to provide multi-layered security, not only to protect and ensure against burglary of stored items such as passports, cash, jewellery and watches, but also to provide a solution against copying data from credit cards or car keys through high-tech theft devices. The EverydaySafe™ is built to S1 certification security standard, ensuring a high security protection for contents.

* Patent pending

When locked, the EverydaySafe™ is completely hidden and concealed. Convenient and easy access using your fingerprint or smartphone.

SIMPLE AND FAST ACCESS THROUGH THE CHUBBSAFES SMARTPHONE APP

After downloading the dedicated ChubbSafes EverydaySafe™ app, users can create their profile, as well as those of family members or further individuals they wish to provide access to. The EverydaySafe™ can be conveniently unlocked and opened from the app, enabling quick and easy access to either deposit or collect chosen items. After use, users simply push the drawer closed, with the safe returning to its disguised and secure state. After closing, the safe will make an audible locking noise and a push notification to the connected smartphone confirms that the safe is secure.

Next to the unlocking function, the app also provides an activity log functionality, in which users can see when the safe has been opened, and by whom.

KEY FEATURES

SPACE SAVING

The EverydaySafe™ is a patented solution (patent pending) for security concerns to store valuables in a kitchen, a wardrobe or in an office desk, while it clearly offers space saving qualities compared to a conventional safe.

FITS INTO YOUR STANDARD KITCHEN

It is constructed to fit into any standard furniture element, and special measures can be discussed to fit into further furniture. The EverydaySafe™ can of course be retrofitted. It takes around 30 minutes to install it into a kitchen element. The minimum dimensions required for installation are: W 561 × D 500 × H 134mm.

EASILY OPENED

The safe is conveniently accessible, yet completely concealed. It can quickly and securely be opened via a biometric fingerprint sensor and a smartphone app.

SECURE ANCHORING

The secure anchoring provides an assurance against attempts to forcibly remove the safe from the furniture.

HIGH SECURITY

The safes are designed to provide high level security and protect against the burglary of items such as passports, cash, jewellery, watches, credit cards, car keys and any other premium or important item.

- Built to a certified EN 14450 construction – tested and validated by the independent, ECB•S approved certification institute Istituto Giordano in Bellaria, Italy.
- The safe is secured via an electronic high security locking unit that is certified according to ECB•S class B and VDS class 2.
- The smartphone app and biometric fingerprint reader have been validated via independent penetration tests, carried out by Orange Cyberdefense, Sweden. The biometric fingerprint reader securely stores the fingerprint template of the enrolled user. All codes and encryption keys are stored in a safe hardware security module (HSM) to avoid any extraction of secret information.
- Protection against data theft as a result of Faraday protection. This Faraday functionality ensures that any data emitting device placed within the EverydaySafe™ has its signal range significantly reduced by a factor of 30. In real terms, this means that a car key with a “keyless entry” feature that typically has a range of 3 metres – previously susceptible to hacking from outside of a residence – has its functional range reduced to only 10cm.
